13. SFTP Import Support for Pipe-Delimited CSV Files	27

1. 1. Delete Segment FTP Data (Segment Data screen)

A **Delete** button is now available on the **Segment Data (FTP)** tab inside **Segment Data**. Users can remove Segment FTP data for the selected book, FTP period, and data service directly from the screen, instead of relying on backend or support intervention.

This works the same way as the existing **Delete** option on the **Segment Data (PRD)** tab.

1.1 Delete Functionality

1. A confirmation message appears showing:
 - Book
 - FTP period
 - Data service
2. Click **Yes** to delete, or **No** to cancel
3. On success, the Segment FTP grid refreshes automatically
4. A success message confirms that the data has been deleted

Navigation

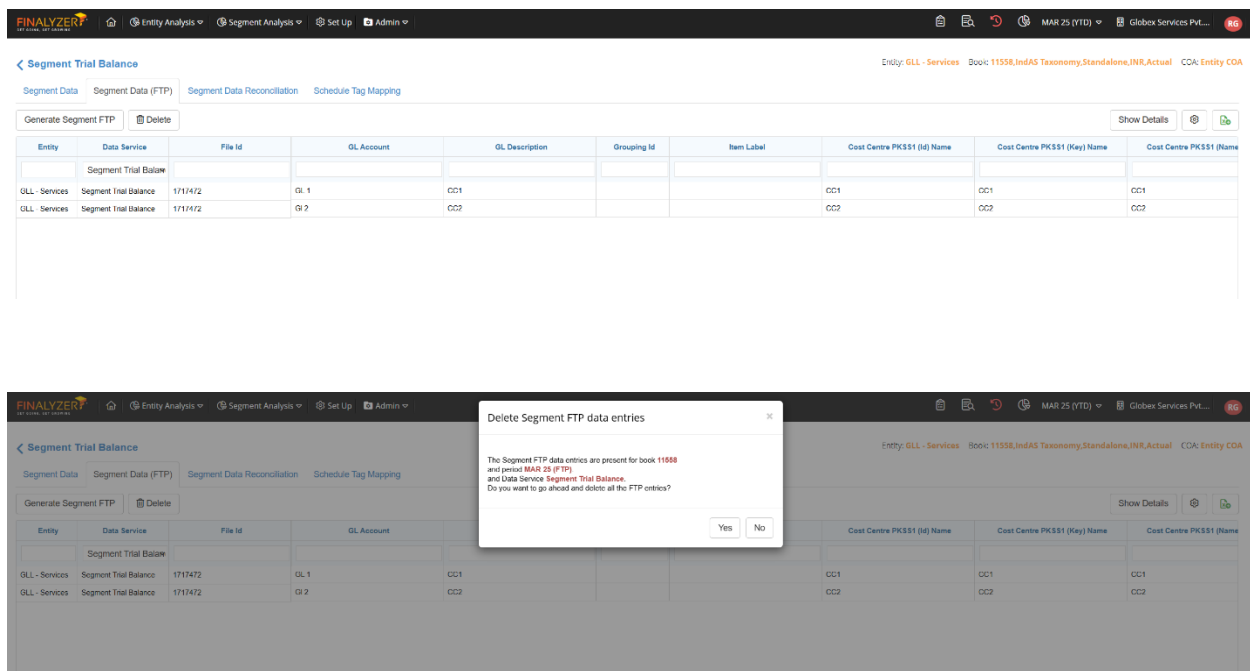

1. Go to **Set Up → Upload Data → Segment Data**
2. Open the **Segment Data (FTP)** tab
3. Select the required **Book**, **FTP Period**, and **Data Service**
4. Click the **Delete** button next to **Generate Segment FTP**

Who can use this

- Users need the existing **Delete Segment Data** permission
- If you do not have access, the **Delete** button will not be shown

To enable access (Admin):

Admin → User Role Management → Manage Roles → Entitlements → Analytics Module → Set Up → Upload Data → Delete Segment Data

1.2 Key Information

- **Frozen period:** If the period is frozen, delete is not allowed
- **Incremental upload:** If the data service uses incremental upload, a warning is shown that data uploaded across all files for that service will be deleted
- **File filter:** If a file definition is selected in the grid, only data for that file is deleted
- **When Delete is not shown:** The button may be hidden for certain data services or when the screen is opened from other workflows (for example Allocation, Disclosure, or Schedule Transactions)

Key Benefits

Users can quickly clear incorrect or unwanted Segment FTP data from the Segment Data screen and regenerate it when needed, making data correction faster and easier.

2. Settings Icon on Entity & Book Setup

A **Settings** icon has been added on the **Entity & Book Setup** screen to let users customize the columns shown in the Entity and Book lists.

2.1 Functionality

Show only the columns needed for daily work

- Hide unused fields to make the screen easier to read

- Apply different column views for Entity list and Book list

Feature Access

- **Entity tab:** Settings icon near the Upload buttons
- **Book tab:** Settings icon near **Audit Trail** and **Export to Excel**

Navigation:

1. Go to **Admin → Entity And Book Setup**
2. Open the **Entity** or **Book** tab
3. Click the **Settings** (gear) icon
4. In the settings window, choose which columns you want to show or hide
5. Save the settings
6. The grid refreshes with your selected column layout

Page 1 of 1100

View 1 - 39 of 39

Benefit

Users can personalize the Entity and Book grids based on their role and workflow, without changing master data.

3. Copy Role (User Role Management)

Administrators can create a new role by copying an existing role's entitlements and access settings, instead of configuring everything manually.

3.1 Role Copy Functionality:

1. A new role is created with the name and description you entered
2. All entitlements from the source role are copied to the new role, including:
 - Entities
 - Report Groups
 - Audit & Other Reports
 - Dimension Members
 - Data Services
 - Modules
 - Menu
 - Workflow Activity

- Taxonomy
- 3. The new role appears in the **Manage Roles** grid
- 4. A success message is shown: *“Role copied successfully.”*

Note: User assignments are **not** copied. Only role configuration and entitlements are duplicated.

3.2 Key Information

- **New Role Name** and **Description** are mandatory
- The new role name must be unique
- You can copy from an existing role and then adjust entitlements if needed
- Users who can access **Manage Roles** can use **Copy role** (no separate entitlement is required)

Benefit

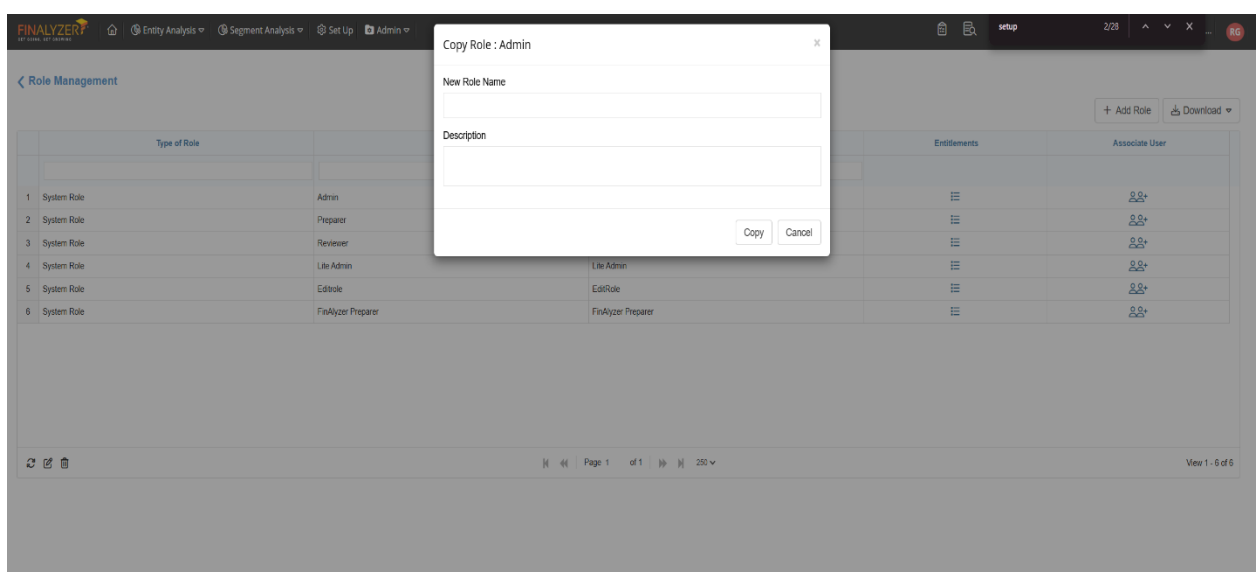

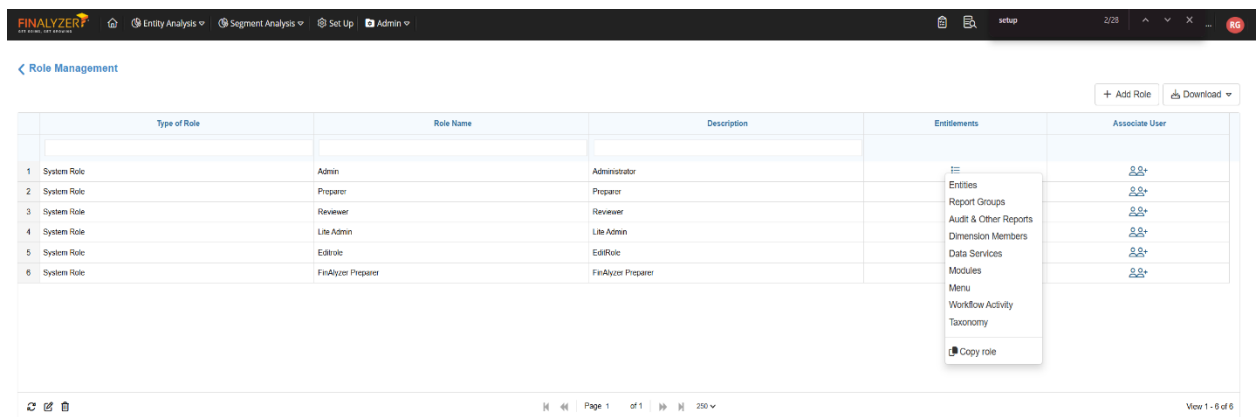

Administrators can quickly create similar roles (for example Preparer, Reviewer, or regional variants) by copying an existing role and making only the required changes. This reduces setup time and keeps role configuration consistent.

Navigation :

Admin → User Role Management → Manage Roles → Entitlements → Copy role

Step by step:

1. Go to **Admin → User Role Management**
 2. Click **Manage Roles**
 3. In the role list, click the **Entitlements** icon (list icon) for the role you want to copy
 4. From the menu, select **Copy role**
 5. Enter **New Role Name** and **Description**
 6. Click **Copy**
-

4.Schedule Automation

Schedule setup is faster and more consistent. Instead of repeating the same steps across admin screens and individual books, the following capabilities are available:

1. **Include a standard schedule at taxonomy level** — a single action copies a ready-made schedule setup from master into the selected taxonomy, including the schedule definition, dimensions, dimension members, data processing rules, input template, report template, and data services already configured at master level.
2. **Assign that schedule to many books at once** — multiple books can receive the schedule without configuring each entity separately.
3. **Include schedules from taxonomy on a single book** — schedules already defined at taxonomy level can be added from Company Setup for one entity.

Existing manual options (**Add Schedule**, **Edit Schedule Definition**, and related actions) remain unchanged and continue to support custom setup when required.

4.1 Key Functionality

Feature	Location	Purpose
Include from Master	Admin → Taxonomy Setup → Taxonomy Schedule	Adds a standard schedule (for example Payables or Receivables) to a taxonomy by copying the complete master-level configuration in one step (see Include from Master procedure below).
Assign to Books	Taxonomy Schedule → row Actions → Assign to Books	Rolls out a taxonomy-level schedule to selected books in bulk. Books that already have the schedule are skipped.
Include from Taxonomy Schedule	Setup → Company Setup → Schedules	Adds one or more taxonomy-defined schedules to a single book. The book inherits definition, rules, and settings from the taxonomy schedule.

4.2 How to Use

Step 1 — Taxonomy level

Admin → Taxonomy Schedule
→ Choose taxonomy → Include from Master
→ Select schedule type → Include

Step 2 — Roll out to books (choose one)

Option A — Many books

Taxonomy Schedule → Actions → Assign to Books → Select books → Assign

Option B — One book

Company Setup → Schedules → Include from Taxonomy Schedule → Select types → Include

Step 1 is completed once per schedule type per taxonomy. Option A or B is used when new books require that schedule.

4.3 Navigation

Taxonomy-level actions begin at **Admin → Taxonomy Setup → Taxonomy Schedule** (select the taxonomy first).

1. Include from Master

1. Select **Include from Master**.
2. In the dialog, select **one** standard schedule.
3. Select **Include** and verify the new row appears in the grid.

The include action brings into the tenant everything maintained at master level for that schedule type—schedule definition, dimensions, dimension members, data processing rules, input template, report template, and data services—so these items do not need to be set up separately in each admin area.

If the schedule type is already on the taxonomy, a notification is displayed and no duplicate is created.

2. Assign to Books

1. On the schedule row, open **Actions** (:) and select **Assign to Books**.
2. Select the target books (**Select All** selects every visible book; the grid can be filtered first).
3. Select **Assign**.

A summary indicates how many books were assigned, skipped, or could not be assigned. When partial failure occurs, remaining books can be addressed individually.

3. Include from Taxonomy Schedule

1. Navigate to **Setup → Company Setup**, open the entity, and open the **Schedules** tab.
2. Select **Include from Taxonomy Schedule**.
3. Select one or more schedule types not yet on the book, then select **Include**.
4. Verify the schedules appear in the Schedules grid.

If every taxonomy schedule type is already on the book, a message indicates that nothing further is available to include.

4.4 User-Facing Messages

Message	Meaning
<i>"[Schedule type]" was set up successfully for this taxonomy.</i>	Include from Master completed successfully.
<i>"[Schedule type]" is already configured for this taxonomy.</i>	The schedule type is already on the taxonomy; no duplicate was created.
<i>"[Schedule type]" was assigned successfully to N book(s).</i>	Assign to Books completed for all selected books.
<i>N book(s) already had this schedule configured.</i>	Those books were skipped because the schedule was already present.
<i>Select at least 1 book to assign.</i>	No book was selected in the Assign to Books dialog.
<i>All taxonomy schedule types are already defined for this book.</i>	No further schedule types remain available to include from taxonomy on this book.
<i>Related Party Schedule cannot be added until the company is linked to a Related Party source system.</i>	Related Party schedules require RP source setup on the company before they can be added.

5. KPI Formula — Period and Scenario Selection

When building a KPI formula, **Period type** and **Scenario type** can be set directly in the application when each formula item is added.

Previously, values such as opening balance or a non-default period/scenario combination required a backend change by the development team. These selections are now available on the **Formula** step of the Add/Edit KPI form, so routine updates and corrections can be handled from **Report Setup** without external support.

5.1 Key Functionality

Item	Detail
Location	Report Setup → KPI → Add or Edit KPI → Formula
When it applies	Add Item is selected under Specify formula or Specify formula condition
What is configured	For each item added to the formula, Period type and Scenario type define which period and scenario the item resolves against
Default values	Current period and Actual are pre-selected when the item selection dialog opens

The chosen values are stored with the KPI and used when the formula is calculated.

5.2 Feature Options

Period type

Option	Typical use
Opening balance	Balance at the start of the period (for example, opening cash or opening equity)
Current period	Value for the active reporting period

Option	Typical use
Previous period	Value from the immediately preceding period
Previous year	Value from the same period in the prior year

Scenario type

Option	Typical use
Actual	Reported actual data
Movement	Movement or change-based amounts
Budget	Budget or plan data

Navigation

1. Navigate to **Report Setup → KPI**.
2. Add a new KPI or open **Edit KPI** for an existing one.
3. On the **Formula** step, select **Add Item** under **Specify formula** (or under **Specify formula condition**, if applicable).
4. In the item selection dialog, set **Period type** and **Scenario type** before choosing the line item from the tree.
5. Select the required account or taxonomy item.
6. Repeat for each additional formula item, adjusting period or scenario where needed.
7. Complete the remaining KPI steps and save.

Benefit

Each formula item can use a different period type and scenario type. For example, a ratio KPI can combine an opening-balance numerator with a current-period denominator.

6. RP Tag Order Sequence

Each **RP Tag** can now be assigned an **Order sequence no** that controls the display order of tags in the RP Tag master list and in RP reports.

6.1 Key Functionality:

Item	Detail
Location	RP Setup → 1. Master Setup → RP Tag tab
What is configured	Order sequence no on each RP Tag defines its position relative to other tags
Where it applies	RP Tag grid (sorted by sequence) and RP reports that list or group rows by RP Tag
Optional	Tags without a sequence number appear after all numbered tags

The same order is used wherever RP Tags are shown in sequence—master data and supported RP reports share one definition per tenant.

Navigation

1. Set order when adding or editing an RP Tag

1. Navigate to **RP Setup** → **1. Master Setup** → **RP Tag**.
2. Select **Add RP Tag**, or open **Edit** for an existing tag.
3. Enter a value in **Order sequence no** (a positive whole number, for example 1, 2, 3).
4. Complete the remaining RP Tag fields and save.

The RP Tag grid refreshes with tags sorted by **Order sequence no** (numbered tags first, in ascending order).

2. Re-order tags in bulk

1. On the **RP Tag** tab, select **Re-order**.
2. In the re-order dialog, drag RP Tags into the required sequence.
3. Save the new order.

Sequence numbers are updated to match the order shown in the dialog.

7. Enhanced Dimension Member Deletion Validation

Added comprehensive validation to prevent deletion of a Dimension Member when it has active dependencies or is referenced by existing configurations or transaction data. A validation details dialog is displayed to help users identify the associated dependencies before deletion.

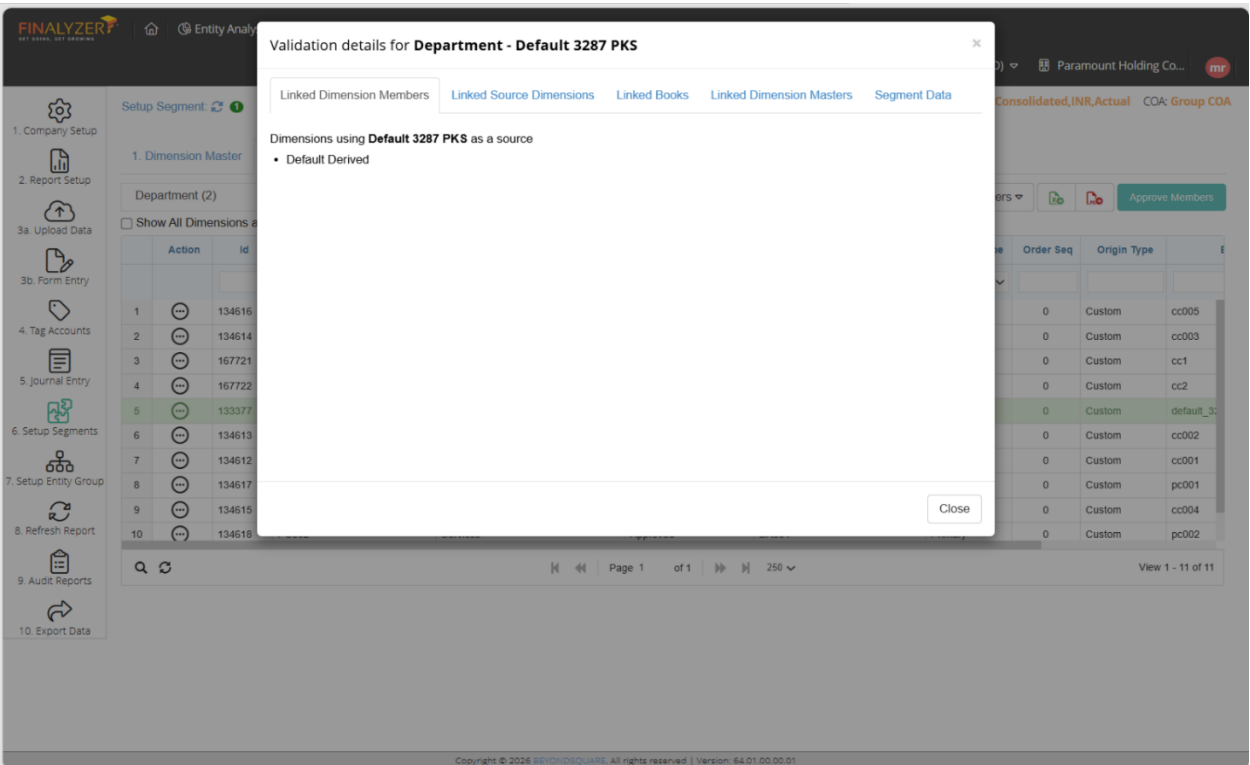

7.1 Key Functionality

Validation Details:

- **Linked Dimension Members** – Displays dimension members that are derived using the selected member as a source.
- **Linked Source Dimensions** – Displays source dimensions from which the selected derived member is created.
- **Linked Books** – Displays books where the selected member is configured as the default segment member.
- **Linked Dimension Masters** – Displays dimensions where the selected member is configured as the default dimension member.
- **Segment Data** – Displays books and reporting periods that contain transaction data associated with the selected member.

8. Output Template Changes

Restriction on Re-Preparing Reports After Period Freeze

When a reporting period is frozen, any modifications made to the associated report group should not trigger a report re-preparation process.

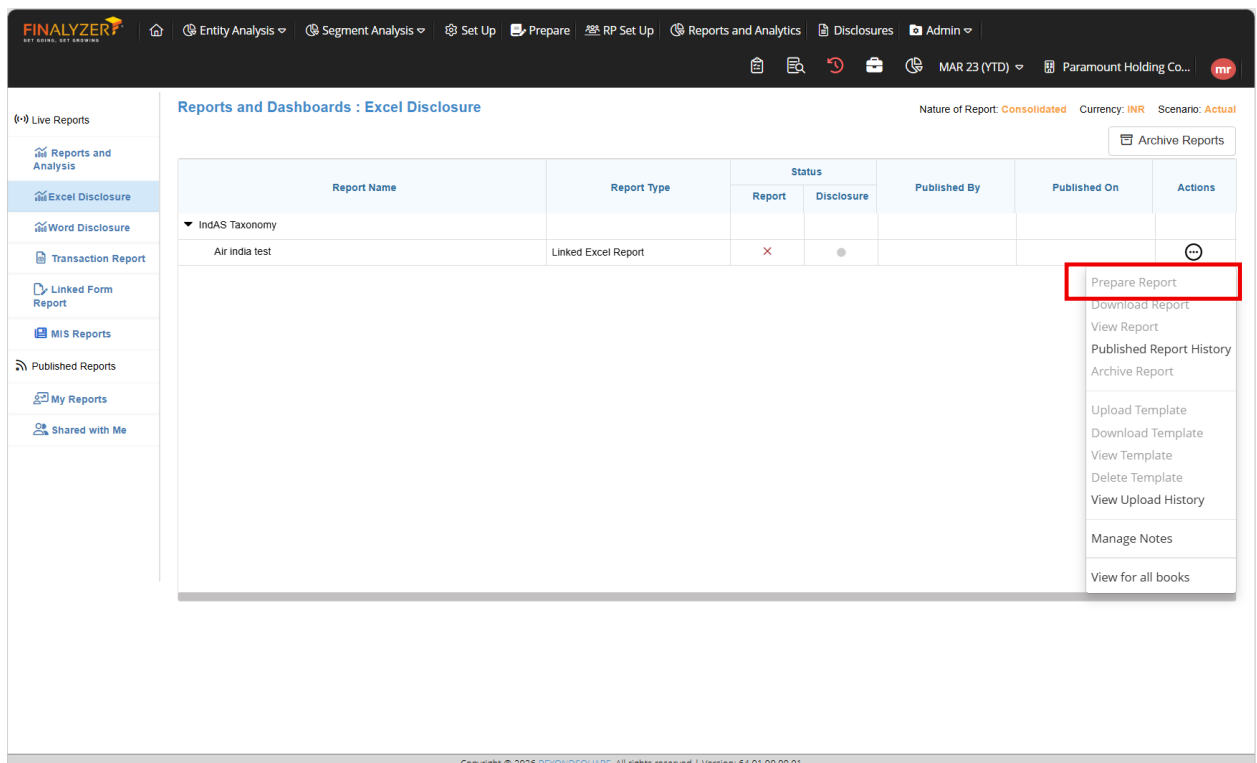

Purpose:

- Preserve report integrity.
- Ensure consistency of finalized reporting data.

The screenshot shows the FINALYZER application interface. At the top, a green notification bar states "Period frozen successfully." Below the navigation bar, the "My Companies" section is active. It displays a table of companies with columns for Entity Name, Short Name, Book Id, Nature of Report, Book Type, Currency, Trial Balance Entries (Source, ADJ, ELM), Validation Checks, Report Details (Frozen, Version, Job Status, Submitted On), Schedule Books created, and Action. The first row, "Paramount Holding Company (Consolidated)", is highlighted with a red box. Below it, other companies like "Paramount Knowledge Services", "Paramount Technologies Limited", and "Paramount Inc" are listed. The "Frozen" column shows a red 'X' for the highlighted company, indicating it is frozen.

Entity Name	Short Name	Book Id	Nature of Report	Book Type	Currency	Trial Balance Entries			Validation Checks	Report Details				Schedule Books created	Action
						Source	ADJ	ELM		Frozen	Version	Job Status	Submitted On		
▼ Paramount Holding Company (Consolidated)	Paramount Holding	11933	Consolidated	Consolidated	INR	0	0	15	🚩	🔒	✗	✓	15 Jun 2026 21:16:2	5	⋮
Paramount Knowledge Services	PKS	11908	Standalone	Standalone	INR	247	0	0	🚩		✗	✓	15 Jun 2026 21:16:0	7	⋮
Paramount Technologies Limited	PTL	11910	Standalone	Standalone	INR	280	0	0	🚩		✓	✓	15 Jun 2026 21:15:2	7	⋮
▼ Paramount Inc	Pinc	11914	Standalone	Conversion	INR	257	2	0	🚩		✗	✓	15 Jun 2026 21:15:0	7	⋮
Paramount Inc	Pinc	11912	Standalone	Standalone	USD	237	0	0	🚩		✗	✓	15 Jun 2026 21:14:2	7	⋮

The screenshot shows the "Reports and Dashboards : Excel Disclosure" section of the FINALYZER application. The left sidebar contains a list of report types: Live Reports, Reports and Analysis, Excel Disclosure (selected), Word Disclosure, Transaction Report, Linked Form Report, MIS Reports, Published Reports, My Reports, and Shared with Me. The main area displays a table of reports with columns for Report Name, Report Type, Status (Report, Disclosure), Published By, Published On, and Actions. The "Air India test" report is highlighted. A dropdown menu is open for the "Air India test" report, showing options: Prepare Report, Download Report, View Report, Published Report History, Archive Report, Upload Template, Download Template, View Template, Delete Template, View Upload History, Manage Notes, and View for all books. The "Prepare Report" option is highlighted with a red box.

Report Name	Report Type	Status		Published By	Published On	Actions
		Report	Disclosure			
▼ IndAS Taxonomy						
Air India test	Linked Excel Report	✗	●			⋮

9. Audit Reports

A few new **Audit Reports** have been introduced to provide visibility into changes made across various entities in the system. This helps in tracking modifications and maintaining accountability.

Access Configuration

To enable access to Audit Reports for a user role:

1. Navigate to:
Admin → User Role Management → Manage Roles → Entitlements → Audit & Other Reports
2. Identify the required audit reports.
3. Grant access to the selected reports for the desired role.

The screenshot shows the 'Role Management' page in the Finalizer application. A table lists various system roles, including 'Admin', 'Preparer', 'Reviewer', 'Lite Admin', 'FMS Preparer', 'XBRL Admin', 'Custom Role', 'Finalizer User', 'XBRL Analyzer', 'Segment Report Users', and 'Editrole'. For the 'Admin' role, the 'Entitlements' dropdown menu is open, showing options like 'Entities', 'Report Groups', 'Audit & Other Reports' (highlighted with a red box), 'Dimension Members', 'Data Services', 'Modules', 'Menu', 'Workflow Activity', and 'Taxonomy'. The 'Associate User' column shows icons for each role.

Copyright © 2026 BEYONDSQUARE. All rights reserved | Version: 63.02.03.00.01

Accessing Audit Reports

Once access is configured:

1. Navigate to:
Top Bar (Setup) → Audit Reports (Left Pane)
2. Users will see only those reports for which their role has been granted access.

MIS Reports Relocation – The **MIS Pack** option has been moved from **Entity Analysis → Download Report** to the **Report Analysis -> MIS Reports** tab.

10. Specific Entity – Period-Based Data Upload

Introduced support for uploading data for specific entities based on a selected reporting period, improving accuracy and simplifying period-specific data management.

10.1 Key Functionality

1. Added a configuration option in **Book Settings** to set the number of periods allowed for data upload for a specific entity.
2. The system now tracks and displays the periods in which data has been uploaded for the current book.

11.Audit Record Comparison

Introduced a field-level comparison view for audit records that highlights changes between revisions, making it easier to identify modified fields. Updates are visually marked, with previous and full values available on hover, improving clarity and readability of audit history.

This enhancement is now available across key areas including **Taxonomy, GL Accounts, Entity, Book, Exchange Rates, User, Roles, Data Services, Rules, KPIs, Dimensions, Allocations, Disclosure components, and Report templates.**

11.1 Key Functionality

- 1. Introduced a **field-level comparison view** for updated audit records to help users easily identify changes between revisions.
- 2. Modified fields are highlighted with an **amber indicator** for quick recognition.
- 3. Previous values can be viewed on hover where applicable.
- 4. Long text values are truncated for better readability, with the full current value available on hover.

12. RP Master level activities in Task Management

RP Master setup activities are now available in Task Management as **Linked Activities**, so RP Master work can be planned, assigned, and tracked like other process tasks.

What's new

- Added **8 RP Master-level linked activities** in Task Management:
 - Recon Nature
 - RP Tag
 - Relationship Master
 - Related Party Master
 - RP Association
 - Link RP to Entities
 - RP Reports

- Exception Report

Navigation

Task Management:

Account Setting- Task- Add Task – Linked activity drop down

The screenshot shows a web application interface for task management. A dropdown menu is open, displaying a list of activities. The activities listed are: Empty Analysis report, Allocation Setup (highlighted in blue), Exchange Rate, Audit Pack, Financial Statement, Baseline Report, Form Entry, Recon Nature, RP Tag, Relationship Master, Related Party Master, RP Association, Link RP to Entities, RP Reports, Exception Report, and Financial Statement. Below the dropdown, there are input fields for 'When:' (Start Date Offset * and End Date Offset *) and 'Who:'. The 'When:' section includes two text input fields with question mark icons next to them.

13. SFTP Import Support for Pipe-Delimited CSV Files

Expanded SFTP import support to include CSV files and pipe-delimited formats, ensuring consistent processing with existing text-based file handling.

- 1.The system now supports importing **.csv files via SFTP/FTPS**, in addition to existing **.txt file support**.
2. SFTP/FTPS inbound imports now accept **.csv files as a valid format** (previously limited to .txt files).
- 3.Pipe-delimited CSV files are processed using the same internal format as text files, using **“|” as the field delimiter** and **“#END#” as the row terminator**.
